Background: This intronless gene is a member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the wingless type MMTV integration site family of signaling proteins. This gene encodes a protein that is coupled to the beta-catenin canonical signaling pathway. Competition between the wingless-type MMTV integration site family; member 3A and wingless-type MMTV integration site family; member 5A gene products for binding of this protein is thought to regulate the beta-catenin-dependent and -independent pathways.
