	PARP1 Rabbit Polyclonal Antibody – TA321381
Background:	This gene encodes a chromatin-associated enzyme; poly(ADP-ribosyl)transferase; which modifies various nuclear proteins by poly(ADP-ribosyl)ation. The modification is dependent on DNA and is involved in the regulation of various important cellular processes such as differentiation; proliferation; and tumor transformation and also in the regulation of the molecular events involved in the recovery of cell from DNA damage. In addition; this enzyme may be the site of mutation in Fanconi anemia; and may participate in the pathophysiology of type I diabetes.
Synonyms:	ADPRT; ADPRT 1; ADPRT1; ARTD1; pADPRT-1; PARP; PARP-1; PPOL
Protein Families	: Druggable Genome, Stem cell - Pluripotency, Transcription Factors
Protein Pathwa	ys: Base excision repair
