Background: Guanine nucleotide-binding protein G(z) subunit alpha?is a?protein?that in humans is

encoded by the?GNAZgene. The protein encoded by this gene is a member of a G protein subfamily that mediates signal transduction in pertussis toxin-insensitive systems. This encoded protein may play a role in maintaining the ionic balance of perilymphatic and endolymphatic cochlear fluids. GNAZ has been shown to interact with EYA2; RGS20 and

RGS19.

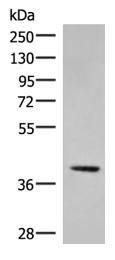

Synonyms: alpha z polypeptide; guanine nucleotide binding protein; guanine nucleotide binding protein

(G protein); transducin alpha
