	MMP10 Rabbit Polyclonal Antibody – TA321484S
Background:	Proteins of the matrix metalloproteinase (MMP) family are involved in the breakdown of extracellular matrix in normal physiological processes; such as embryonic development; reproduction; and tissue remodeling; as well as in disease processes; such as arthritis and metastasis. Most MMP's are secreted as inactive proproteins which are activated when cleaved by extracellular proteinases. The enzyme encoded by this gene degrades proteoglycans and fibronectin. The gene is part of a cluster of MMP genes which localize to chromosome 11q22.3.
Synonyms:	SL-2; STMY2
Note:	Antibody has been shown to cross react with MMP3 protein.
Protein Families	: Druggable Genome, Protease
