Background:	The protein encoded by this gene is one of the three catalytic subunits of protein phosphatase 1 (PP1). PP1 is a serine/threonine specific protein phosphatase known to be involved in the regulation of a variety of cellular processes; such as cell division; glycogen metabolism; muscle contractility; protein synthesis; and HIV-1 viral transcription. Mouse studies suggest that PP1 functions as a suppressor of learning and memory. Two alternatively spliced transcript variants encoding distinct isoforms have been observed.
Synonyms:	HEL-S-80p; PP-1B; PP1B; PP1beta; PPP1CD
