**Background:** The protein encoded by this gene is a membrane protein that can form a non-selective

channel permeable to calcium and other cations. The encoded protein appears to be induced

to form channels by a receptor tyrosine kinase-activated phosphatidylinositol second messenger system and also by depletion of intracellular calcium stores. Two transcript

variants encoding different isoforms have been found for this gene.

Synonyms: SCA41; TRP3

**Protein Families:** Druggable Genome, Ion Channels: Transient receptor potential, Transmembrane
