Scherken AlkBH1 Rabbit Polyclonal Antibody – TA321740

Background:This gene encodes a homolog to the E. coli alkB gene product. The E. coli alkB protein is part
of the adaptive response mechanism of DNA alkylation damage repair. It is involved in
damage reversal by oxidative demethylation of 1-methyladenine and 3-methylcytosine.
Dioxygenase that repairs alkylated single-stranded DNA and RNA containing 3-
methylcytosine by oxidative demethylation. Requires molecular oxygen; alpha-ketoglutarate
and iron. May have a role in placental trophoblast lineage differentiation. Has DNA lyase
activity and introduces double-stranded breaks at abasic sites. Cleaves both single-stranded
DNA and double-stranded DNA at abasic sites; with the greatest activity towards double-
stranded DNA with two abasic sites.
