GRIGENE BTG2 Rabbit Polyclonal Antibody – TA321784

Background:The protein encoded by this gene is a member of the BTG/Tob family. This family has
structurally related proteins that appear to have antiproliferative properties. This encoded
protein is involved in the regulation of the G1/S transition of the cell cycle. Protein BTG2 also
known as BTG family member 2 or NGF-inducible anti-proliferative protein PC3 or NGF-
inducible protein TIS21; is a protein that in humans is encoded by the BTG2 gene (B-cell
translocation gene 2) and in other mammals by the homologous Btg2 gene. This protein
controls cell cycle progression and proneural genes expression by acting as a transcription
coregulator that enhances or inhibits the activity of transcription factors.

Synonyms:	APRO1; PC3; TIS21
Protein Families:	Transcription Factors
