Background:

The protein encoded by this gene is a member of a family that includes putative ATP-binding proteins involved in vesicle transport and fusion; 26S proteasome function; and assembly of peroxisomes. This protein; as a structural protein; is associated with clathrin; and heat-shock protein Hsc70; to form a complex. It has been implicated in a number of cellular events that are regulated during mitosis; including homotypic membrane fusion; spindle pole body function; and ubiquitin-dependent protein degradation.
