Background:	DTX3 functions as an E3 ubiquitin ligase. Regulator of Notch signaling; a signaling pathway involved in cell-cell communications that regulates a broad spectrum of cell-fate determinations. Probably acts both as a positive and negative regulator of Notch; depending on the developmental and cell context. By similarity. Functions as an ubiquitin ligase protein in vitro; suggesting that it may regulate the Notch pathway via some ubiquitin ligase activity.
Synonyms:	deltex3; RNF154
