Background:	This gene product belongs to the tektin family of proteins. Tektins comprise a family of filament-forming proteins that are coassembled with tubulins to form ciliary and flagellar microtubules. This gene is predominantly expressed in the testis and in mouse; tektin 1 mRNA was localized to the spermatocytes and round spermatids in the seminiferous tubules; indicating that it may play a role in spermatogenesis.?
Synonyms:	tektin 1
