## **GRIGENE** ACAD11 Rabbit Polyclonal Antibody – TA322146S

Background:The deduced full-length?ACAD11?protein contains an N-terminal aminoglycoside<br/>phosphotransferase domain, followed by a mitochondria localization signal and ACAD N-<br/>terminal, middle, and C-terminal domains. It also has a glycosylation site and a C-terminal<br/>peroxisome-targeting signal. The ACAD domain contains a catalytic aspartate rather than the<br/>catalytic glutamate found in most other ACADs. Real-time RT-PCR detected variable?ACAD11?<br/>expression in all tissues examined, with highest expression in adult brain, followed by heart,<br/>liver, spinal cord, and kidney. Western blot analysis of fractionated human cerebellum and<br/>kidney revealed thatACAD11?associated with mitochondrial membranes, but not<br/>mitochondrial matrix. Immunohistochemical analysis showed that?ACAD11colocalized with a<br/>mitochondrial marker in human neuroblastoma cells.
