Background: This protein is involved in neurite outgrowth and cell migration in hippocampal explants.It

has three EGF-like domains; one fibrinogen C-terminal domain and nine fibronectin type III domains. Tenascins are extracellular matrix proteins present during the development of organisms as well as in pathological conditions. Tenascin-W; the fourth and last member of

the tenascin family remains the least well-characterized one.

Synonyms: TN-W

Protein Families: Druggable Genome

Protein Pathways: ECM-receptor interaction, Focal adhesion
