	ACE2 Rabbit Polyclonal Antibody (Angiotensin Converting Enzyme 2) – TA322222
Background:	The protein encoded by this gene belongs to the angiotensin-converting enzyme family of dipeptidyl carboxydipeptidases and has considerable homology to human angiotensin 1 converting enzyme. This secreted protein catalyzes the cleavage of angiotensin I into angiotensin 1-9; and angiotensin II into the vasodilator angiotensin 1-7. The organ- and cell-specific expression of this gene suggests that it may play a role in the regulation of cardiovascular and renal function; as well as fertility. In addition; the encoded protein is a functional receptor for the spike glycoprotein of the human coronaviruses SARS and HCoV-NL63.
Synonyms:	ACEH
Protein Families:	Druggable Genome, Secreted Protein, Transmembrane
Protein Pathway	s: Renin-angiotensin system
