Background:	Forkhead box D3?also known as?FOXD3?is a?forkhead protein?that in humans is encoded by the?FOXD3?gene. This gene belongs to the forkhead protein family of transcription factors which is characterized by a DNA-binding forkhead domain. FoxD3 functions as a transcriptional repressor and contains the C-terminal engrailed homology-1 motif (eh1); which provides an interactive surface with a transcriptional co-repressor Grg4 (Groucho-related gene-4).
Synonyms:	AIS1; Genesis; HFH2; VAMAS2
