	VILIP1 (VSNL1) Rabbit Polyclonal Antibody – TA322856
Background:	This gene is a member of the visinin/recoverin subfamily of neuronal calcium sensor proteins. The encoded protein is strongly expressed in granule cells of the cerebellum where it associates with membranes in a calcium-dependent manner and modulates intracellular signaling pathways of the central nervous system by directly or indirectly regulating the activity of adenylyl cyclase. Alternatively spliced transcript variants have been observed; but their full-length nature has not been determined.
Synonyms:	HLP3; HPCAL3; HUVISL1; VILIP; VILIP-1
Protein Families	: Druggable Genome
