Background: The protein encoded by this gene belongs to the CDK subfamily of the Ser/Thr protein kinase

family. The CDK subfamily members are highly similar to the gene products of S. cerevisiae cdc28; and S. pombe cdc2; and are known to be essential for cell cycle progression. This kinase has been shown to play a role in cellular proliferation and its function is limited to cell cycle G2-M phase. Multiple transcript variants encoding different isoforms have been found

for this gene.
