Entrez Gene 12 Human

P01011

Background: The protein encoded by this gene is a plasma protease inhibitor and member of the serine

protease inhibitor class. Polymorphisms in this protein appear to be tissue specific and influence protease targeting. Variations in this protein's sequence have been implicated in Alzheimer's disease, and deficiency of this protein has been associated with liver disease. Mutations have been identified in patients with Parkinson disease and chronic obstructive

pulmonary disease.

Synonyms: AACT; ACT; GIG24; GIG25

Protein Families: Druggable Genome, Secreted Protein
