Background:	The scaffold protein encoded by this gene is a member of the tumor necrosis factor receptor- associated factor (TRAF) protein family and contains a meprin and TRAF homology (MATH) domain; a RING-type zinc finger; and two TRAF-type zinc fingers. TRAF proteins are associated with; and mediate signal transduction from members of the TNF receptor superfamily. This protein is one of the components of a multiple protein complex which binds to tumor necrosis factor (TNF) receptor cytoplasmic domains and mediates TNF-induced activation. Alternate transcriptional splice variants have been characterized.
Synonyms:	MGC:39780; RNF84
