Background:	This gene product is a gamma-carboxyglutamic acid (Gla)-containing protein thought to be involved in the stimulation of cell proliferation; and may play a role in thrombosis. Alternatively spliced transcript variants encoding different isoforms have been found for this gene. Ligand for tyrosine-protein kinase receptors AXL; TYRO3 and MER whose signaling is implicated in cell growth and survival; cell adhesion and cell migration. GAS6/AXL signaling plays a role in various processes such as endothelial cell survival during acidification by preventing apoptosis; optimal cytokine signaling during human natural killer cell development; hepatic regeneration; gonadotropin-releasing hormone neuron survival and migration; platelet activation; or regulation of thrombotic responses.
