Q15672

Basic helix-loop-helix (bHLH) transcription factors have been implicated in cell lineage

determination and differentiation. The protein encoded by this gene is a bHLH transcription factor and shares similarity with another bHLH transcription factor; Dermo1. The strongest expression of this mRNA is in placental tissue; in adults; mesodermally derived tissues express this mRNA preferentially. Mutations in this gene have been found in patients with

Saethre-Chotzen syndrome.
