# Product datasheet for TA323745

## p57 Kip2 (CDKN1C) Rabbit Polyclonal Antibody

### Product data:

| | |
|---|---|
| **Product Type:** | Primary Antibodies |
| **Applications:** | WB |
| **Recommended Dilution:** | WB: 1:500-2000 |
| **Reactivity:** | Human, Mouse, Rat |
| **Host:** | Rabbit |
| **Isotype:** | IgG |
| **Clonality:** | Polyclonal |
| **Immunogen:** | Synthetic peptide corresponding to a region derived from 49-64 amino acids of human cyclin-dependent kinase inhibitor 1C (p57, Kip2) |
| **Formulation:** | PBS pH7.3, 0.05% NaN3, 50% glycerol |
| **Concentration:** | lot specific |
| **Purification:** | Antigen affinity purification |
| **Conjugation:** | Unconjugated |
| **Storage:** | Store at -20°C as received. |
| **Stability:** | Stable for 12 months from date of receipt. |
| **Predicted Protein Size:** | 32 kDa |
| **Gene Name:** | cyclin-dependent kinase inhibitor 1C |
| **Database Link:** | NP_000067<br>Entrez Gene 12577 MouseEntrez Gene 246060 RatEntrez Gene 1028 Human<br>P49918 |

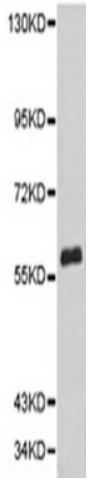
**Background:** p27 Kip1 is a member of the Cip/Kip family of cyclin-dependent kinase inhibitors. Like its relatives, p57 Kip2 and p21 Waf1/Cip1, the ability to enforce the G1 restriction point is derived from its inhibitory binding to CDK2/cyclin E and other CDK/cyclin complexes. Expression levels of p27 are upregulated in quiescent cells and in cells treated with cAMP or other negative cell cycle regulators. Downregulation of p27 can be induced by treatment with interleukin-2 or other mitogens; this involves phosphorylation of p27 and its degradation by the ubiquitin-proteasome pathway. p57 Kip2 (Cyclin-dependent kinase inhibitor 1C) functions as a tumor suppressor. Mutations of p57 Kip2 have been associated with numerous human malignancies as well as Beckwith–Wiedemann syndrome (BWS), characterized by an increased risk of childhood cancer. The amino-terminal CDK inhibitory domain, common to the family, binds to and inhibits CDK/cyclin complexes and restricts cell cycle progression. The unique central region of p57 Kip2 interactes with LIMK-1, a downstream effector of the Rho family of GTPases. By sequestering LIMK-1 in the nucleus, p57 Kip2 disrupts actin dynamics within cells and may be linked to its essential role in embryonic development. In addition, the carboxyl-terminal QT domain of p57KIP2 binds to and inhibits JNK/SAPK activity regulating cellular apoptosis and differentiation. Expression levels of human p57 Kip2 are more restricted then other CDK inhibitors and are controlled by ubiquitination/degradation via the Skp1/Cul1/F-box-type E3 ubiquitin ligase complex SCF-Skp2. This effect is dependent on Thr310. A similar threonine phosphorylation site in p27 Kip1, Thr187, has also been shown to regulate protein stability.

**Synonyms:** BWCR; BWS; KIP2; p57; p57Kip2; WBS

**Protein Families:** Druggable Genome

**Protein Pathways:** Cell cycle

## Product images:



Gel: 10%SDS-PAGE, Lysate: 40 ug, Lane: Hela cells, Primary antibody: CDKN1C Antibody at dilution 1/500, Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution, Exposure time: 1 minute
