Background:	AEBP2?is a zinc finger protein that has been shown to interact with the mammalian Polycomb Repression Complex 2 (PRC2).?AEBP2?is an evolutionarily well-conserved gene that is found in the animals ranging from flying insects to mammals. The transcription of mammalian? AEBP2?is driven by two alternative promoters and produces at least two isoforms of the protein. These isoforms show developmental stage-specific expression patterns: the adult-specific larger form (51 kDa) and the embryo-specific smaller form (32 kDa).?
Synonyms:	MGC17922
