Background:	The protein encoded by this gene is the alpha subunit of the heterodimeric receptor for colony stimulating factor 2; a cytokine which controls the production; differentiation; and function of granulocytes and macrophages. The encoded protein is a member of the cytokine family of receptors. This gene is found in the pseudoautosomal region (PAR) of the X and Y chromosomes. Multiple transcript variants encoding different isoforms have been found for this gene; with some of the isoforms being membrane-bound and others being soluble.
Synonyms:	CD116; CDw116; CSF2R; CSF2RAX; CSF2RAY; CSF2RX; CSF2RY; GM-CSF-R-alpha; GMCSFR; GMR; SMDP4
