Database Link:	NP_078880 Entrez Gene 79657 Human Q9H6T3
Background:	This gene encodes an RNA polymerase II-associated protein. The encoded protein may function in transcriptional regulation and may also regulate apoptosis. Alternatively spliced transcript variants have been described. Forms an interface between the RNA polymerase II enzyme and chaperone/scaffolding protein; suggesting that it is required to connect RNA polymerase II to regulators of protein complex formation.
Synonyms:	FLJ21908
