Background:	This protein may form a receptor-activated non-selective calcium permeant cation channel. Probably is operated by a phosphatidylinositol second messenger system activated by receptor tyrosine kinases or G-protein coupled receptors. Activated by diacylglycerol (DAG). May also be activated by intracellular calcium store depletion. It can interact with MX1 and RNF24. Interacts (via ANK-repeat domains) with PRKG1.
Synonyms:	TRP7
Protein Families:	Druggable Genome, Ion Channels: Transient receptor potential, Transmembrane
