Background:	The calpains; calcium-activated neutral proteases; are nonlysosomal; intracellular cysteine proteases. The mammalian calpains include ubiquitous; stomach-specific; and muscle-specific proteins. The ubiquitous enzymes consist of heterodimers with distinct large; catalytic subunits associated with a common small; regulatory subunit. This gene encodes the large subunit of the ubiquitous enzyme; calpain 1. Several transcript variants encoding two different isoforms have been found for this gene.
Synonyms:	CANP; CANP1; CANPL1; muCANP; muCL; SPG76
