Background:	This protein is encoded by COX16; corresponding to the previously uncharacterized open reading frame YJL003w of the yeast genome. COX16 was identified in studies of COX-deficient mutants previously assigned to complementation group G22 of a collection of yeast pet mutants. To determine its location; Cox16p was tagged with a Myc epitope at the C terminus.
Synonyms:	C14orf112; HSPC203
