Background:

This gene encodes a member of the mucin family of proteins; which are highly glycosylated macromolecular components of mucus secretions. This family member is the major gel-forming mucin in mucus. It is a major contributor to the lubricating and viscoelastic properties of whole saliva; normal lung mucus and cervical mucus. This gene has been found to be up-regulated in some human diseases; including sinus mucosa of chronic rhinosinusitis (CRS); CRS with nasal polyposis; chronic obstructive pulmonary disease (COPD) and H. pylori-associated gastric disease; and it may be involved in the pathogenesis of these diseases.

Synonyms:

MG1; MUC-5B; MUC5; MUC9
