Background:	DAB1 an adaptor molecule functioning in neural development. The laminar organization of multiple neuronal types in the cerebral cortex is required for normal cognitive function. In mice, the disabled-1 gene plays a central role in brain development, directing the migration of cortical neurons past previously formed neurons to reach their proper layer.
Synonyms:	disabled homolog 1; disabled homolog 1 (Drosophila); OTTHUMP00000010045; OTTHUMP00000011753
