GRIGENE SIRT2 Rabbit Polyclonal Antibody – TA326812

Background:Sirtuins are members of the NAD-dependent histone deacetylase family of proteins that
participate in a variety of cellular functions, including histone deacetylation, gene silencing,
chromosomal stability, and aging. SIRT2, a human homolog of the yeast SIR2 (silent
information regulator-2), functions as transcriptional silencing mediator at mating-type loci,
telomeres and ribosomal gene clusters. SIRT2 expression increases dramatically during
mitosis and is multiply phosphorylated at the G(2)/M transition of the cell cycle. SIRT2 is part
of a phosphorylation cascade where it is phosphorylated late in G(2), during M, and into the
period of cytokinesis. Inhibition of SIRT2 is reported to rescue alpha-synuclein toxicity and
modify inclusion morphology in a cellular model of Parkinsons disease.
