| Background:           | Protein phosphatase 1 (PP1) is the main eukaryotic protein serine/threonine phosphatase<br>that regulates an enormous variety of cellular processes including protein-protein<br>interactions, gene transcription, cell-cycle progression and apoptosis. It is a trimeric complex<br>composed of a regulatory subunit, a variable subunit and a catalytic subunit. The catalytic<br>subunit of PP1 (PP1c) can interact with amount of regulatory subunits in vivo that target it to<br>particular subcellular locations and regulate its activity towards specific substrates. PPP1CB<br>migrated as a 37kd protein on SDS page. |
| Synonyms:             | HEL-S-80p; PP-1B; PP1B; PP1beta; PPP1CD  |
| Protein Families:     | Druggable Genome, Phosphatase  |
