| Product Type:         | Primary Antibodies  |
|-----------------------|---|
| Applications:         | ICC/IF, IHC, WB   |
| Recommended Dilution: | WB 1:500 - 1:2000   |
| Reactivity:           | Human, Mouse, Rat   |
| Host:                 | Rabbit  |
| lsotype:              | IgG   |
| Clonality:            | Polyclonal  |
| Immunogen:            | Recombinant protein of human CAPN1  |
| Formulation:          | Store at -20C or -80C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3   |
| Concentration:        | lot specific  |
| Purification:         | Affinity purification   |
| Conjugation:          | Unconjugated  |
| Storage:              | Store at -20°C as received.   |
| Stability:            | Stable for 12 months from date of receipt.  |
| Gene Name:            | calpain 1   |
| Database Link:        | <u>NP_005177</u><br><u>Entrez Gene 12333 MouseEntrez Gene 29153 RatEntrez Gene 823 Human</u><br><u>P07384</u> |

|                   | Calpain 1 (CAPN1) Rabbit Polyclonal Antibody – TA326969   |
|-------------------|---|
| Background:       | Calpain is a calcium-dependent thiol proteinase that is functionally active as a heterodimer<br>composed of a small regulatory subunit and one of at least two large catalytic subunits<br>(calpain 1 or calpain 2). In vitro, calpain 1 (mu-calpain) requires micromolar levels of calcium,<br>while calpain 2 (M-calpain) requires millimolar levels of calcium for activation. The regulation<br>of calpain in vivo is the subject of many current studies, which suggest that proteolytic activity<br>is regulated post-transcriptionally by mechanisms such as calcium requirements, subcellular<br>localization of the heterodimer, phosphorylation via the EGFR-Erk signaling cascade,<br>endogenous inhibitors (calpastatin) and autoproteolytic cleavage. Calpastatin negatively<br>regulates autoproteolytic cleavage of calpain 1 between Gly27 and Leu28. Calpain influences<br>cell migration by modifying rather than degrading its substrates responsible for cell adhesion<br>and cytoskeletal arrangement. Control of calpain activity has caught the attention of drug<br>development since limiting its activity could mute invasiveness of tumors or chronic<br>inflammation. |
| Synonyms:         | CANP; CANP1; CANPL1; muCANP; muCL   |
| Protein Families: | Druggable Genome, Protease  |
| Protein Pathway   | s: Alzheimer's disease, Apoptosis   |
