# Product datasheet for TA326970

## **CDC25A Rabbit Polyclonal Antibody**

## **Product data:**

Product Type:	Primary Antibodies
Applications:	ICC/IF, IHC, WB
Recommended Dilution:	WB: 1:500-1:2000
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
lsotype:	lgG
Clonality:	Polyclonal
Immunogen:	Recombinant protein of human CDC25A
Formulation:	Store at -20C or -80C. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3
Concentration:	lot specific
Purification:	Affinity purification
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	cell division cycle 25A
Database Link:	<u>NP_001780</u> Entrez Gene 12530 MouseEntrez Gene 171102 RatEntrez Gene 993 Human P30304

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### **CDC25A Rabbit Polyclonal Antibody – TA326970**

Background:The cdc25 protein phosphatase family plays a critical role in activating cyclin-dependent<br/>kinases (CDKs) via dephosphorylation of conserved Thr14/Tyr15 inhibitory phosphorylation<br/>sites. While cdc25C is primarily responsible for activating CDK1 to overcome the G2/M<br/>checkpoint and allow mitotic entry, the primary substrate of cdc25A is CDK2, which, when<br/>active, allows progression through the G1/S and intra-S checkpoints. Abundance, subcellular<br/>localization and activity of cdc25A is tightly controlled by a variety of mechanisms, including<br/>phosphorylation, ubiquitination, and inhibitory binding to 14-3-3 proteins. During normal cell<br/>cycle progression, elevated c-Myc and E2F transcription factor levels lead to increased cdc25A<br/>expression. When conditions are favorable for DNA synthesis, cdc25A and CDK2 form an<br/>activation loop, wherein each activates the other enzyme. DNA damage, on the other hand,<br/>leads to multisite phosphorylation at inhibitory sites (Ser123, Ser177, Ser278, Ser292, and<br/>Thr506) by Chk1 and Chk2, which result in 14-3-3 binding and ubiquitin-mediated<br/>degradation.

Synonyms:	CDC25A2
Protein Families:	Druggable Genome, Phosphatase
Protein Pathways:	Cell cycle, Progesterone-mediated oocyte maturation
