Background: IL-7 plays a key role in lymphopoiesis and lymphoid homeostasis . Stromal and epithelial cells within the bone marrow and thymus produce IL-7 (1). The primary targets of IL-7 are T cells, B cells, and dendritic cells . IL-7 is crucial for T cell development, the importance of which is underscored by the lack of T cells in both mice and humans that are deficient in IL-7/IL-7R signaling . While IL-7 appears to be required for B cell development in mice, the role of IL-7 in human B cell development is unclear . In addition to its effects on T cell lymphopoiesis, IL-7 promotes the maintenance and survival of naïve and memory $\alpha\beta$ T cells, as well as $\gamma\delta$ T cells . The IL-7 receptor is a heterodimer of the common γ chain, δ , and the IL-7-specific IL-7Ra . IL-7 activates PI3K/Akt, Jak1/2, and Stat1, 3, and 5 .
