Note: CD21 (also known as complement receptor 2 (CR2), C3d receptor, or EBV receptor) is a 140

kDa membrane protein on B-lymphocytes to which the Epstein-Barr virus (EBV) binds during

infection of these cells. The antigen is absent on T-lymphocytes, monocytes, and

granulocytes.Anti-CD21 is useful in the identification of follicular dendritic cell matrix found in normal lymph node and tonsillar tissue. This antibody also labels follicular dendritic cell sarcomas. Anti-CD21 is valuable in differentiating follicular lymphoma with marginal zone differentiation from marginal zone lymphoma with follicular involvement. It also plays a role in separating among nodular lymphocyte predominant Hodgkin lymphoma, lymphocyte-rich classic Hodgkin lymphoma, and T-cell/histiocyte-rich B-cell lymphoma in combination with

other B-cell and T-cell markers.
