#### **GRIGENE** RAB6A Rabbit Polyclonal Antibody – TA332788S

Background:This gene encodes a member of the RAB family, which belongs to the small GTPase<br/>superfamily. GTPases of the RAB family bind to various effectors to regulate the targeting and<br/>fusion of transport carriers to acceptor compartments. This protein is located at the Golgi<br/>apparatus, which regulates trafficking in both a retrograde (from early endosomes and Golgi<br/>to the endoplasmic reticulum) and an anterograde (from the Golgi to the plasma membrane)<br/>directions. Myosin II is an effector of this protein in these processes. This protein is also<br/>involved in assembly of human cytomegalovirus (HCMV) by interacting with the cellular<br/>protein Bicaudal D1, which interacts with the HCMV virion tegument protein, pp150. Multiple<br/>alternatively spliced transcript variants encoding different isoforms have been identified.
