GRIGENE VASP Rabbit Polyclonal Antibody – TA333056S

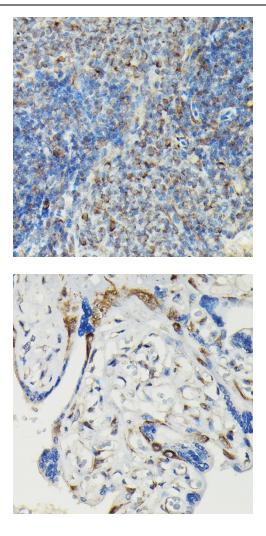

- Background: Vasodilator-stimulated phosphoprotein (VASP) is a member of the Ena-VASP protein family. Ena-VASP family members contain an EHV1 N-terminal domain that binds proteins containing E/DFPPPXD/E motifs and targets Ena-VASP proteins to focal adhesions. In the mid-region of the protein, family members have a proline-rich domain that binds SH3 and WW domaincontaining proteins. Their C-terminal EVH2 domain mediates tetramerization and binds both G and F actin. VASP is associated with filamentous actin formation and likely plays a widespread role in cell adhesion and motility. VASP may also be involved in the intracellular signaling pathways that regulate integrin-extracellular matrix interactions. VASP is regulated by the cyclic nucleotide-dependent kinases PKA and PKG.
- Synonyms:vasodilator-stimulated phosphoproteinProtein Families:Druggable Genome, Stem cell PluripotencyProtein Pathways:Fc gamma R-mediated phagocytosis, Focal adhesion, Leukocyte transendothelial migration
