Background: LY6G6D belongs to a cluster of leukocyte antigen-6 (LY6) genes located in the major

histocompatibility complex (MHC) class III region on chromosome 6. Members of the LY6 superfamily typically contain 70 to 80 amino acids, including 8 to 10 cysteines. Most LY6 proteins are attached to the cell surface by a glycosylphosphatidylinositol (GPI) anchor that is

directly involved in signal transduction.
