SHOX2 Rabbit Polyclonal Antibody - TA333910

Background: SHOX2 is a member of the homeo box family of genes that encode proteins containing a 60-

amino acid residue motif that represents a DNA binding domain. Homeo box genes have been characterized extensively as transcriptional regulators involved in pattern formation in both invertebrate and vertebrate species. Several human genetic disorders are caused by aberrations in human homeo box genes. SHOX is a pseudoautosomal homeo box gene that is thought to be responsible for idiopathic short stature and implicated to play a role in the

short stature phenotype of Turner syndrome patients.
