Entrez Gene 11342 Human

O43567

Background: RNF13 contains 1 RING-type zinc finger. The exact function of RNF13 is not known. The protein

encoded by this gene contains a RING zinc finger, a motif known to be involved in protein-

protein interactions. The specific function of this gene has not yet been determined.

Alternatively spliced transcript variants that encode the same protein have been reported. A

pseudogene, which is also located on chromosome 3, has been defined for this gene.

Synonyms: RZF
