Background: COPS2 is an essential component of the COP9 signal some complex (CSN), a complex

involved in various cellular and developmental processes. The CSN complex is an essential regulator of the ubiquitin (Ubl) conjugation pathway by mediating the deneddylation of the

cullin subunits of SCF-type E3 ligase complexes. The complex is also involved in

phosphorylation of p53/TP53, c-jun/JUN, IkappaBalpha/NFKBIA, ITPK1 and IRF8/ICSBP. COPS2 is also innvolved in early stage of neuronal differentiation via its interaction with NIF3L1.
