Product datasheet for TA336576

DAP5 (EIF4G2) Mouse Monoclonal Antibody [Clone ID: 39C534.1]

Product data:

Product Type:	Primary Antibodies
Clone Name:	39C534.1
Applications:	FC, WB
Recommended Dilution:	WB: 1-2 ug/ml, FC: 1 ug per million cells
Reactivity:	Human, Mouse
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	The antibody was raised against two synthetic peptides corresponding to amino acids 796- 812 of human DAP-5 protein.
Formulation:	PBS containing 0.05% BSA, 0.05% Sodium Azide. Store at 4C short term. Aliquot and store at - 20C long term. Avoid freeze-thaw cycles.
Concentration:	lot specific
Purification:	Protein G purified
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	eukaryotic translation initiation factor 4 gamma 2
Database Link:	<u>NP_001409</u> <u>Entrez Gene 13690 MouseEntrez Gene 1982 Human</u> <u>P78344</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

Section 2017 Contemporal Antibody [Clone ID: 39C534.1] – TA336576

Background:Apoptosis, or programmed cell death, occurs during normal cellular differentiation and
development of multicellular organisms. Recently, five novel apoptotic genes (named DAP
genes for: Death Associated Proteins) have been identified that code for proteins, which
display a diverse spectrum of biochemical activities. These include a novel type of
calcium/calmodulin-regulated kinase, which carries ankyrin repeats and a death domain
(DAP-kinase), a nucleotide-binding protein (DAP-3), a small proline-rich cytoplasmic protein
(DAP-1), and a novel homolog of the eIF4G translation initiation factor (DAP-5). DAP-5 (also
named p97 and NAT1) is a ubiquitously expressed member of the translation initiation factor
eIF4G family that lacks the eIF4E binding site. DAP-5 was cloned from HeLa cells using a
functional approach in attempt to isolate cDNA fragments, which convey resistance to
gamma interferon (IFN-g)-induced programmed cell death (3). A fragment of the cDNA when
expressed as a mini-protein of 28 kDa protects the cell from IFN-g induced apoptosis. The full-
length DAP-5 cDNA codes for a protein of approximate molecular weight of 97 kDa. Low level
of expression protects the cells, whereas high level of expression results in cell death.

Synonyms:	AAG1; DAP5; NAT1; P97
Protein Families:	Transcription Factors
Protein Pathways:	Viral myocarditis

Product images:

Western Blot: DAP5 Antibody (39C534.1) TA336576 - Analysis of TA336576 (1ug) on 15 ug of total cell lysate from Jurkat cells.
