| | CLIC2 Rabbit Polyclonal Antibody – TA338518 |
|------------------|--|
| Background: | This gene encodes a chloride intracellular channel protein. Chloride channels are a diverse group of proteins that regulate fundamental cellular processes including stabilization of cell membrane potential, transepithelial transport, maintenance of intracellular pH, and regulation of cell volume. This protein may play a role in inhibiting the function of ryanodine receptor 2. A mutation in this gene is the cause of X-linked mental retardation-32. [provided by RefSeq, Aug 2013] |
