Background: The protein encoded by this gene belongs to the Nudix hydrolase family. Nudix boxes are

found in a family of diverse enzymes that catalyze the hydrolysis of nucleoside diphosphate derivatives. This enzyme is an ADP-ribose pyrophosphatase that catalyzes the hydrolysis of ADP-ribose to AMP and ribose-5-P. It requires divalent metal ions and an intact Nudix motif for enzymatic activity. Alternatively spliced transcript variants encoding different isoforms

have been found for this gene. [provided by RefSeq, Oct 2011]
