	N myc interactor (NMI) Rabbit Polyclonal Antibody – TA339098
Background:	NMYC interactor (NMI) encodes a protein that interacts with NMYC and CMYC (two members of the oncogene Myc family), and other transcription factors containing a Zip, HLH, or HLH-Zip motif. The NMI protein also interacts with all STATs except STAT2 and augments STAT- mediated transcription in response to cytokines IL2 and IFN-gamma. The NMI mRNA has low expression levels in all human fetal and adult tissues tested except brain and has high expression in cancer cell line-myeloid leukemias. [provided by RefSeq, Jul 2008]
Synonyms:	N-myc (and STAT) interactor; N-myc-interactor; N-myc and STAT interactor; N-myc interactor
