	CTDSP2 Rabbit Polyclonal Antibody – TA340072
Background:	CTDSP2 preferentially catalyzes the dephosphorylation of 'Ser-5' within the tandem 7 residues repeats in the C-terminal domain (CTD) of the largest RNA polymerase II subunit POLR2A.CTDSP2 negatively regulates RNA polymerase II transcription, possibly by controlling the transition from initiation/capping to processive transcript elongation. CTDSP2 is recruited by REST to neuronal genes that contain RE-1 elements, leading to neuronal gene silencing in non-neuronal cells.CTDSP2 may contribute to the development of sarcomas.
Synonyms:	OS4; PSR2; SCP2
