SP110 Rabbit Polyclonal Antibody – TA341442

Background:	The nuclear body is a multiprotein complex that may have a role inThe regulation of gene transcription.This gene is a member ofThe SP100/SP140 family of nuclear body proteins and encodes a leukocyte-specific nuclear body component.The protein can function as an activator of gene transcription and may serve as a nuclear hormone receptor coactivator. In addition, it has been suggested thatThe protein may play a role in ribosome biogenesis and inThe induction of myeloid cell differentiation. Alternative splicing has been observed forThis gene and three transcript variants, encoding distinct isoforms, have been identified. [provided by RefSeq, Jul 2008]
