ANXA8L1 Rabbit Polyclonal Antibody - TA341648

Background:

ANXA8L2 is a member of the annexin family of evolutionarily conserved Ca2+ and phospholipid binding proteins. ANXA8L2 may function as an an anticoagulant that indirectly inhibits the thromboplastin-specific complex. Overexpression of ANXA8L2 has been associated with acute myelocytic leukemia. This gene encodes a member of the annexin family of evolutionarily conserved Ca2+ and phospholipid binding proteins. The encoded protein may function as an an anticoagulant that indirectly inhibits the thromboplastin-specific complex. Overexpression of this gene has been associated with acute myelocytic leukemia. A highly similar duplicated copy of this gene is found in close proximity on the long arm of chromosome 10.
