NRG1 Rabbit Polyclonal Antibody - TA341925

Background: The protein encoded byThis gene is a membrane glycoprotein that that mediates cell-cell

signaling and plays a critical role in The growth and development of multiple organ systems.

An extraordinary variety of different isoforms are produced from This gene through alternative promoter usage and splicing. These isoforms are expressed in a tissue-specific manner and differ significantly in Their structure, and are classified as types I, II, III, IV, V and VI. Dysregulation of This gene has been linked to diseases such as cancer, schizophrenia, and

bipolar disorder (BPD). [provided by RefSeq, Jun 2014]
